BELFAST OFFICE DIVIDED IN STYLE

At the Belfast office of one of the largest professional services firms in the world, Style worked with architect, Perkins & Will, and Edgewater Contracts, to create flexible space in the company's showcase meeting room on level 16, maximising the panoramic views across the Belfast skyline.

Retaining the light, open feel of the floor, Style installed a semi-automatic, Dorma Hüppe Variflex glass moveable wall, with frosting and manifestation on the panels for added privacy.

Creating a 52 dB acoustic divide, this market-leading moveable wall enables staff to create a smaller, private meeting room off the main open plan floorspace, or open the entire area up for larger conferences and gatherings.

The semi-automatic operation specified for this installation ensures the acoustic performance of the system is maximised by expanding substantial rubber seals to exactly the right pressure every time. Delivering a reliable 52 dB rating, events can be confidently scheduled to run alongside each other without risk of disturbance.

The semi-automatic operation also minimises the chance of damage through manual handling although, as the board faces are manufactured separately to the frame, it is a relatively simple and low cost task to replace a damaged or scuffed one.
