ACOUSTIC SOLUTION FOR LARGE-SCALE OFFICE

Working alongside MPACT and Form Design Consultants, Style Group has delivered a high-performance acoustic solution as part of a large-scale office fit-out of Virgin Money's Glasgow workplace.

Designed to improve speech clarity and reduce reverberation in meeting rooms, focus spaces and collaborative zones, Style installed Autex panels across the 11th and 12th floors, combining strong acoustic absorption with distinctive branded aesthetics.

Autex Cube™ panels were strategically positioned behind display screens and presentation areas to control echo and background noise, while customised Autex Groove™ panels feature a Virgin-inspired pattern, creating full-height feature walls that integrate acoustic performance with bold workplace design.

Following a recent rebrand, Style Group is expanding beyond moveable partitioning systems to include acoustic solutions, creating environments that support collaboration, concentration and everyday workplace performance.

Both Autex systems utilise 2.2mm thick polyester fibre (PET) construction, offering excellent sound absorption performance while remaining lightweight, durable and sustainable.

The completed installation provides a high performance, balanced acoustic environment whilst also reinforcing Virgin Money's contemporary workplace identity.
